# R500 SPI PATENTED

ISEO Ultimate Access Technologies introduces the innovative R500 SPI locking system, which is designed and patented in accordance with the highest security standards.

Patented  
until 2036

## CYLINDER

### Features

The cylinder is equipped with two elements that are located in one of the chambers: the Double Action Pin and the Special Top Pin. These two elements interact with the corresponding key.

## KEY

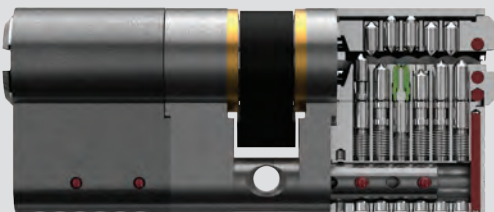

### Features

The key of this system is based on a branded new profile and it is equipped with an innovative SPI pin, which is present on both sides of the key in the respective coding row. The pin SPI acts as an anti-duplication device.

## SPECIAL PIN INSERTED

In the R500 SPI system, the exclusive Special Pin Inserted design works together with specially shaped pins in the cylinder and cylinder body to give the system the highest level of security.

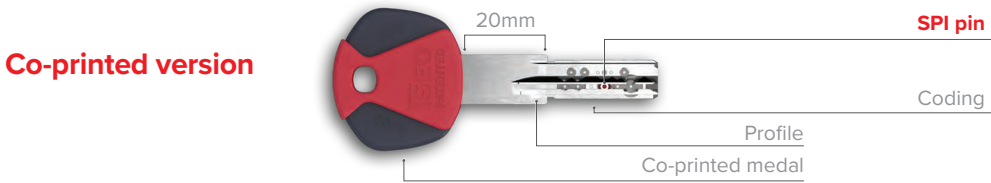

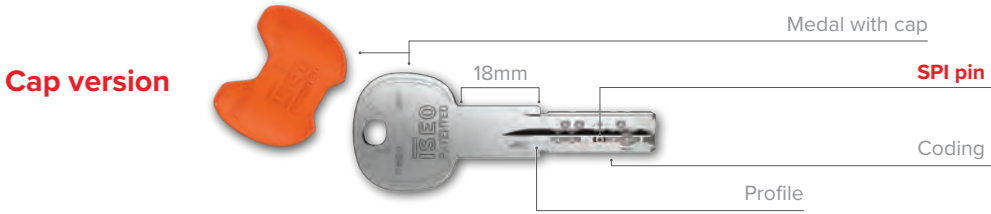

After insertion, the key pin is able to lower the insertions of the cylinder and unlocks it.

# KEY

To meet all market requirements, the key is available in different versions. Depending on the needs, it is possible to select both the design of the key and the length of the neck.

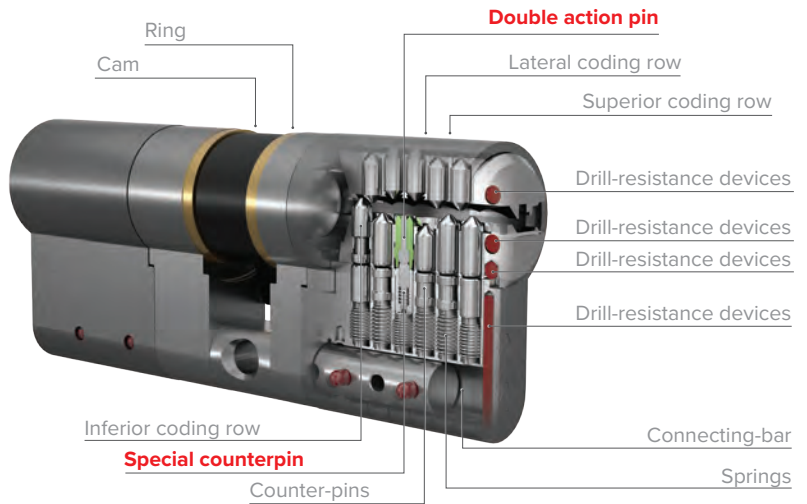

The key has an ergonomic and non-slip design, both in the version with removable cap (available in several colours) and also in the co-printed version.

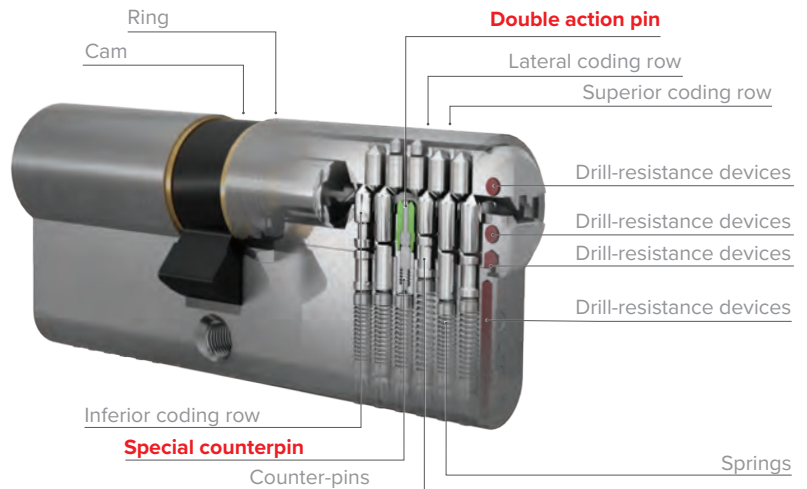

# CYLINDER

The cylinder is available in both compact and modular versions, making it suitable for all security doors.

## Modular version

## Compact version
